About Pravi

- Pravi is a **powerhouse of bold thinkers, problem-solvers and change-makers** who **work with governments and multilateral agencies to deliver impact at scale**
- With Aadhar and UPI, India has shown it to the world that digital public infrastructure can work at extraordinary scale. However, if India needs to be a truly developed nation, **we need more and more such indigenous innovations** which can create disproportionately high **positive impact in the lives of more than a billion people**.
- Instead of waiting for someone else to work on creating these solutions, **we are assembling a team of Avengers** who can take on these puny gods, i.e. the bug-ridden, poorly designed government systems that millions of citizens and public officials have to deal with every day. If you are ready to smash, read on!

Details of the Role Offered

 Role Associate - Tech	 Location Gandhinagar	 Type Final Sem Internship + Fulltime Opportunity
---	--	--

Key Responsibilities

01	Design, build, test and maintain features across the full application stack	02	Collaborate with the product and function teams to define, design, and deploy new features
03	Assist with a well-informed view point for a creation of scalable technical architecture and system designs	04	Bring in technical perspective in product discussions for a superior end user experience
05	Engage with various stakeholders for the integration of internal and external software systems and services	06	Maintain the thorough documentations of deployed code in an organised manner

What We Look For

 Strong academic foundation Good academic record in computer science or a related field, complemented by hands-on projects experience	 Problem-solving depth Exposure to system design, data structures, APIs, databases and modern development practices
 Speed of iteration Build and iterate quickly: prototype ideas, test assumptions and convert concepts into working solutions	 Comfort with ambiguity Thrive in fast-paced, ambiguous environments with high ownership across the project and product lifecycle
 Bias for action Translate functional and domain requirements of the end-users into high quality UX oriented technical solutions	 Ability to ask right questions In the age of AI, finding solution is easier than asking the right question. So strong display of first principle based thinking is expected

Offered Remuneration

₹35,000 per month stipend during the final semester internship

₹10 LPA Fixed + 2 LPA Performance Linked Incentive post joining us full-time
